# About Weithenn.org

- Microsoft MVP 2012 – 2023
- VMware vExpert 2012 – 2023
- Taiwan VMUG (VMware User Group) Leader
- 微軟 S2D 軟體定義儲存技術實戰...等 19 本著作
- 擔任 Kubernetes Summit 2023、DevOpsDays Taipei 2023、COSCUP 2023、Cloud Summit Taiwan 2023、Cloud Summit Taiwan 2022、SRE Conference 2022、DevOpsDays Taipei 2021、Cloud & Edge Summit Taiwan 2021.....等研討會講師

# What is A/B Testing?

# A/B Testing

## A/B Testing

# Blue/Green Deployment (Random Split Client)

# What is GitOps?

“**[GitOps]** works by using **Git** as a **single source of truth** for **declarative** infrastructure and applications.”

-- Weaveworks, “**Guide To GitOps**”

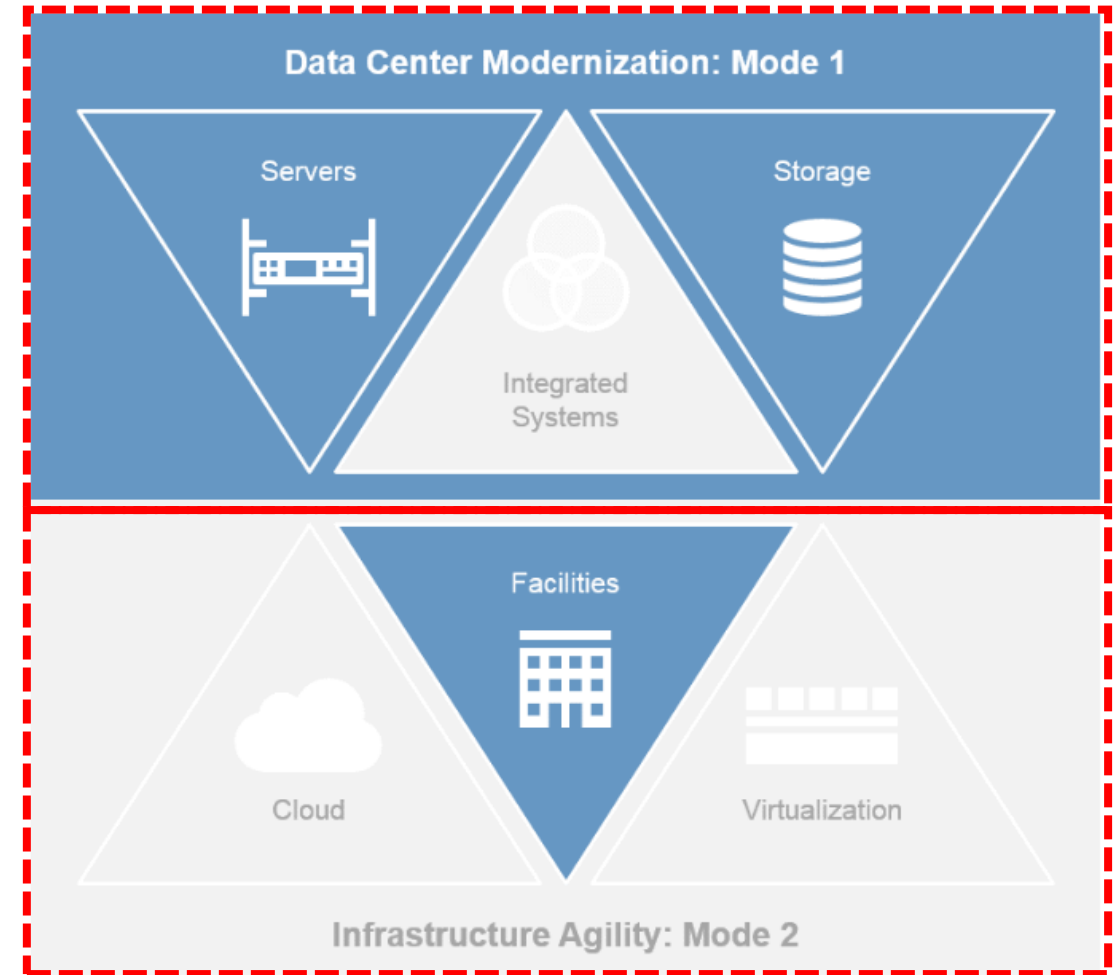

# laC (Infrastructure as Code)

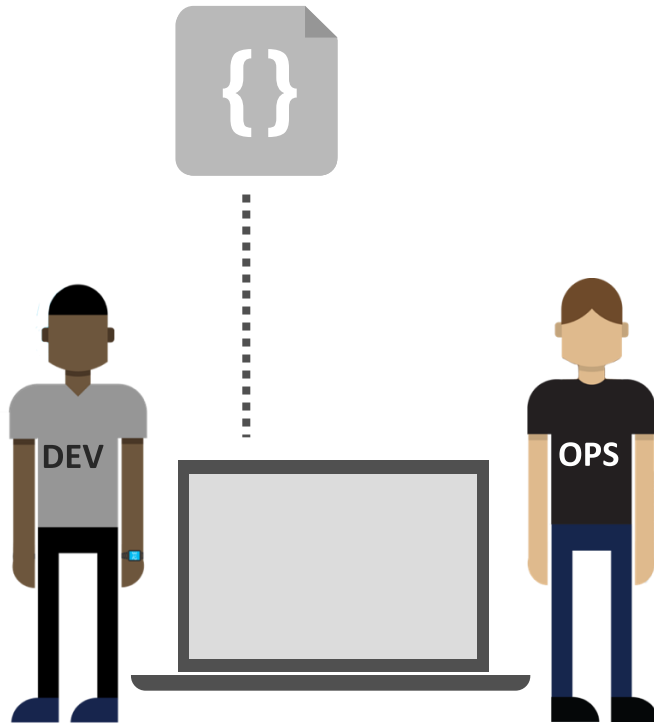

# Bimodal IT – Mode 1 / Mode 2

- Mode 1
  - Traditional Infrastructure
    - Reliability / Stability
  - Physical Server / Storage / Network
- Mode 2
  - Infrastructure Agility
  - Software Defined (SDC, SDS, SDN, SDDC)
  - VM / Container / Microservice
    - Agility / DevOps

SOURCE: GARTNER (JULY 2015)

# IaC (Infrastructure as Code)

## Habits

- Production first mindset
- Infrastructure as flexible resource

## Value

- Optimized Resources
- Accelerate Delivery

## Measure

- Deployment Rate
- MTTR (Mean Time to Repair)

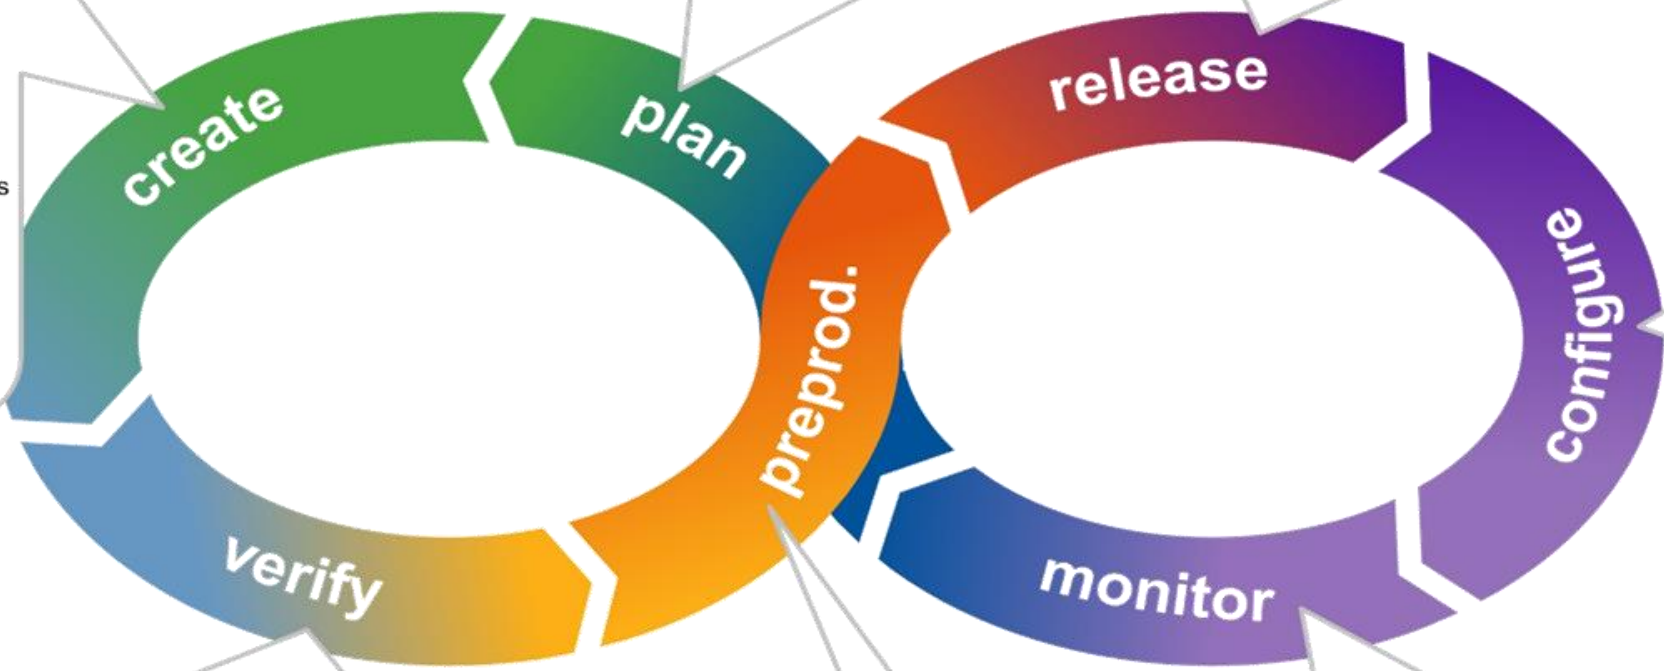

# DevOps Toolchain

## Example Vendors

- Code:**
  - Apple
  - Atlassian
  - Codenvy
  - GitHub
  - IBM
  - JetBrains
  - Microsoft
  - Parasoft
  - Perforce
  - Subversion
- Build:**
  - Atlassian
  - CircleCI
  - IBM
  - JetBrains
  - Jenkins
  - Microsoft
  - OpenMake Software
  - ThoughtWorks
  - Travis CI
- Configure:**
  - CFEngine
  - Chef
  - Puppet Labs
  - Red Hat (Ansible)
  - SaltStack

- Define:**
  - Axure
  - Blueprint
  - eDev
  - IBM
  - iRise
  - Jama
  - Micro Focus (Borland)
- Plan:**
  - AgileCraft
  - Atlassian
  - CA Technologies
  - CollabNet
  - Pivotal
  - Targetprocess
  - VersionOne

- Release, Deploy & Coordination**
  - Atlassian
  - Automic
  - CA Technologies
  - Chef
  - Clarive
  - CollabNet
  - Electric Cloud
  - IBM
  - Inedo
  - Microsoft
  - MidVision
  - OpenMake Software
  - Orca
  - Octopus Deploy
  - Serena Software
  - VMware
  - XebiaLabs

- Continuous Configuration Automation**
  - CFEngine
  - Chef
  - Inedo
  - Puppet Labs
  - Red Hat (Ansible)
  - SaltStack

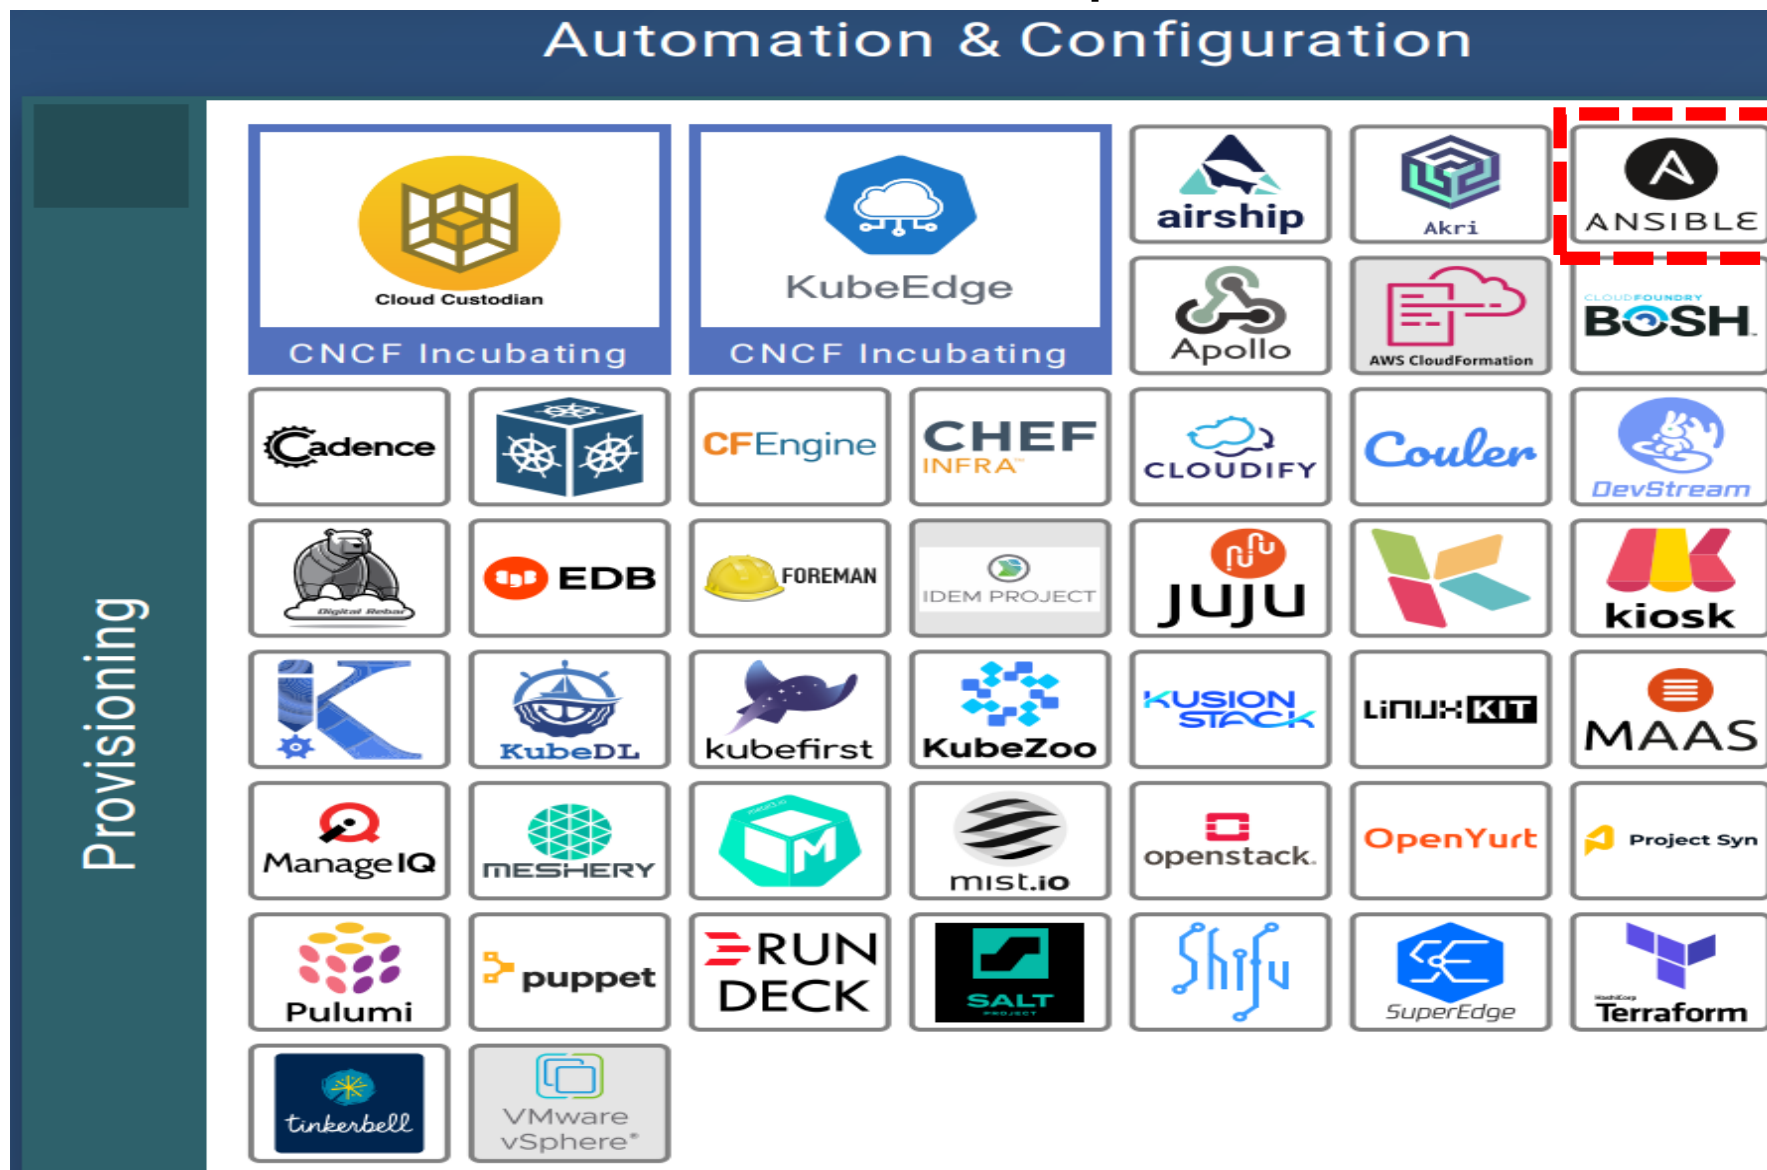

- Test Automation:**
  - IBM
  - Micro Focus
  - Microsoft
  - Sauce Labs
  - ThoughtWorks
  - Tricentis
- Static Analysis:**
  - Cast
  - Microsoft
  - Optimyth Software
  - Parasoft
  - Semmie
  - SonarSource
- Test Lab:**
  - Delphix
  - Microsoft
  - Perfecto
  - Quali
  - Qualsys
  - Skytap
  - SauceLabs
- Security:**
  - Micro Focus
  - Trend Micro
  - IBM
  - Trustwave
  - Veracode
  - Whitehat Security Inc.

- Artifactory
- Atlassian
- Bitbucket
- Clarive
- Electric Cloud
- Inedo
- Sonatype

- Infrastructure, APM & Analytics and Log Mgmt.**
  - Datadog
  - Elastic
  - Ganglia

# CNCF – Cloud Native Landscape

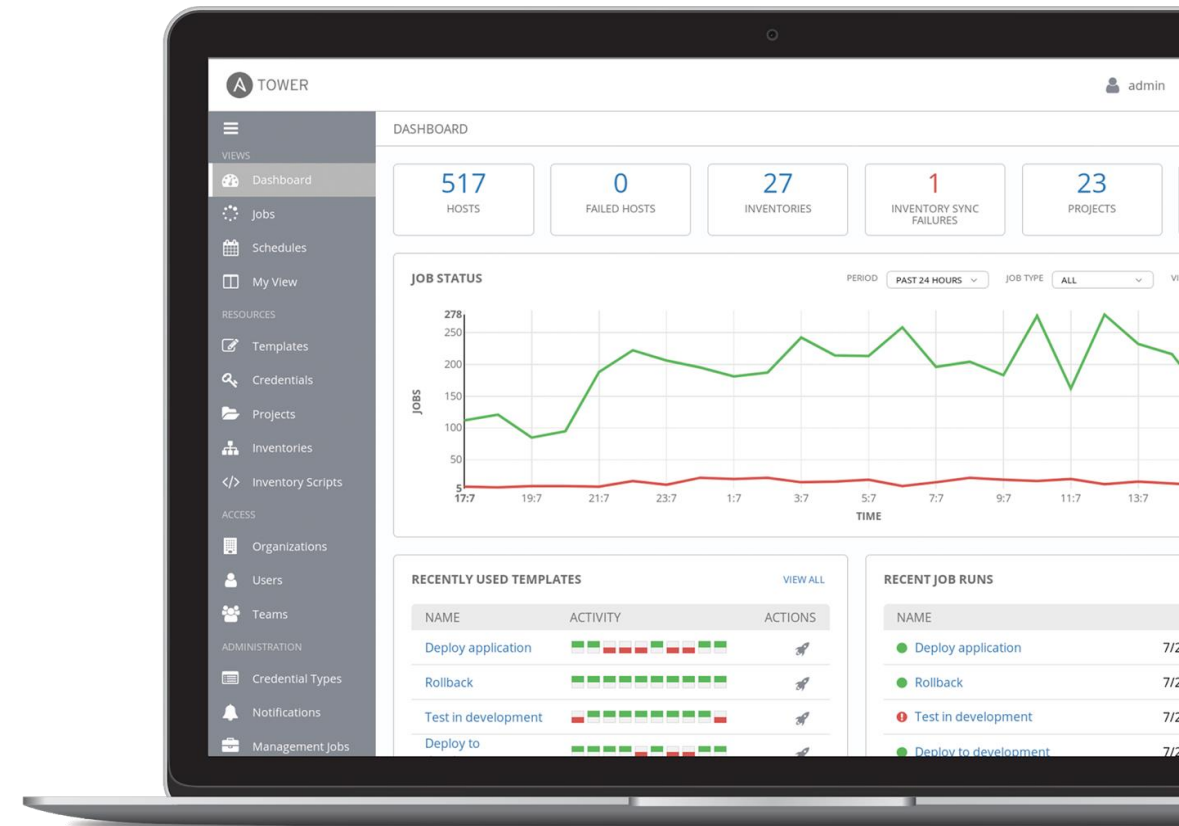

# Why Ansible AWX

# Why Ansible AWX

AWX provides a web-based user interface, REST API, and task engine built on top of Ansible. It is one of the **upstream projects** for Red Hat Ansible Automation Platform.

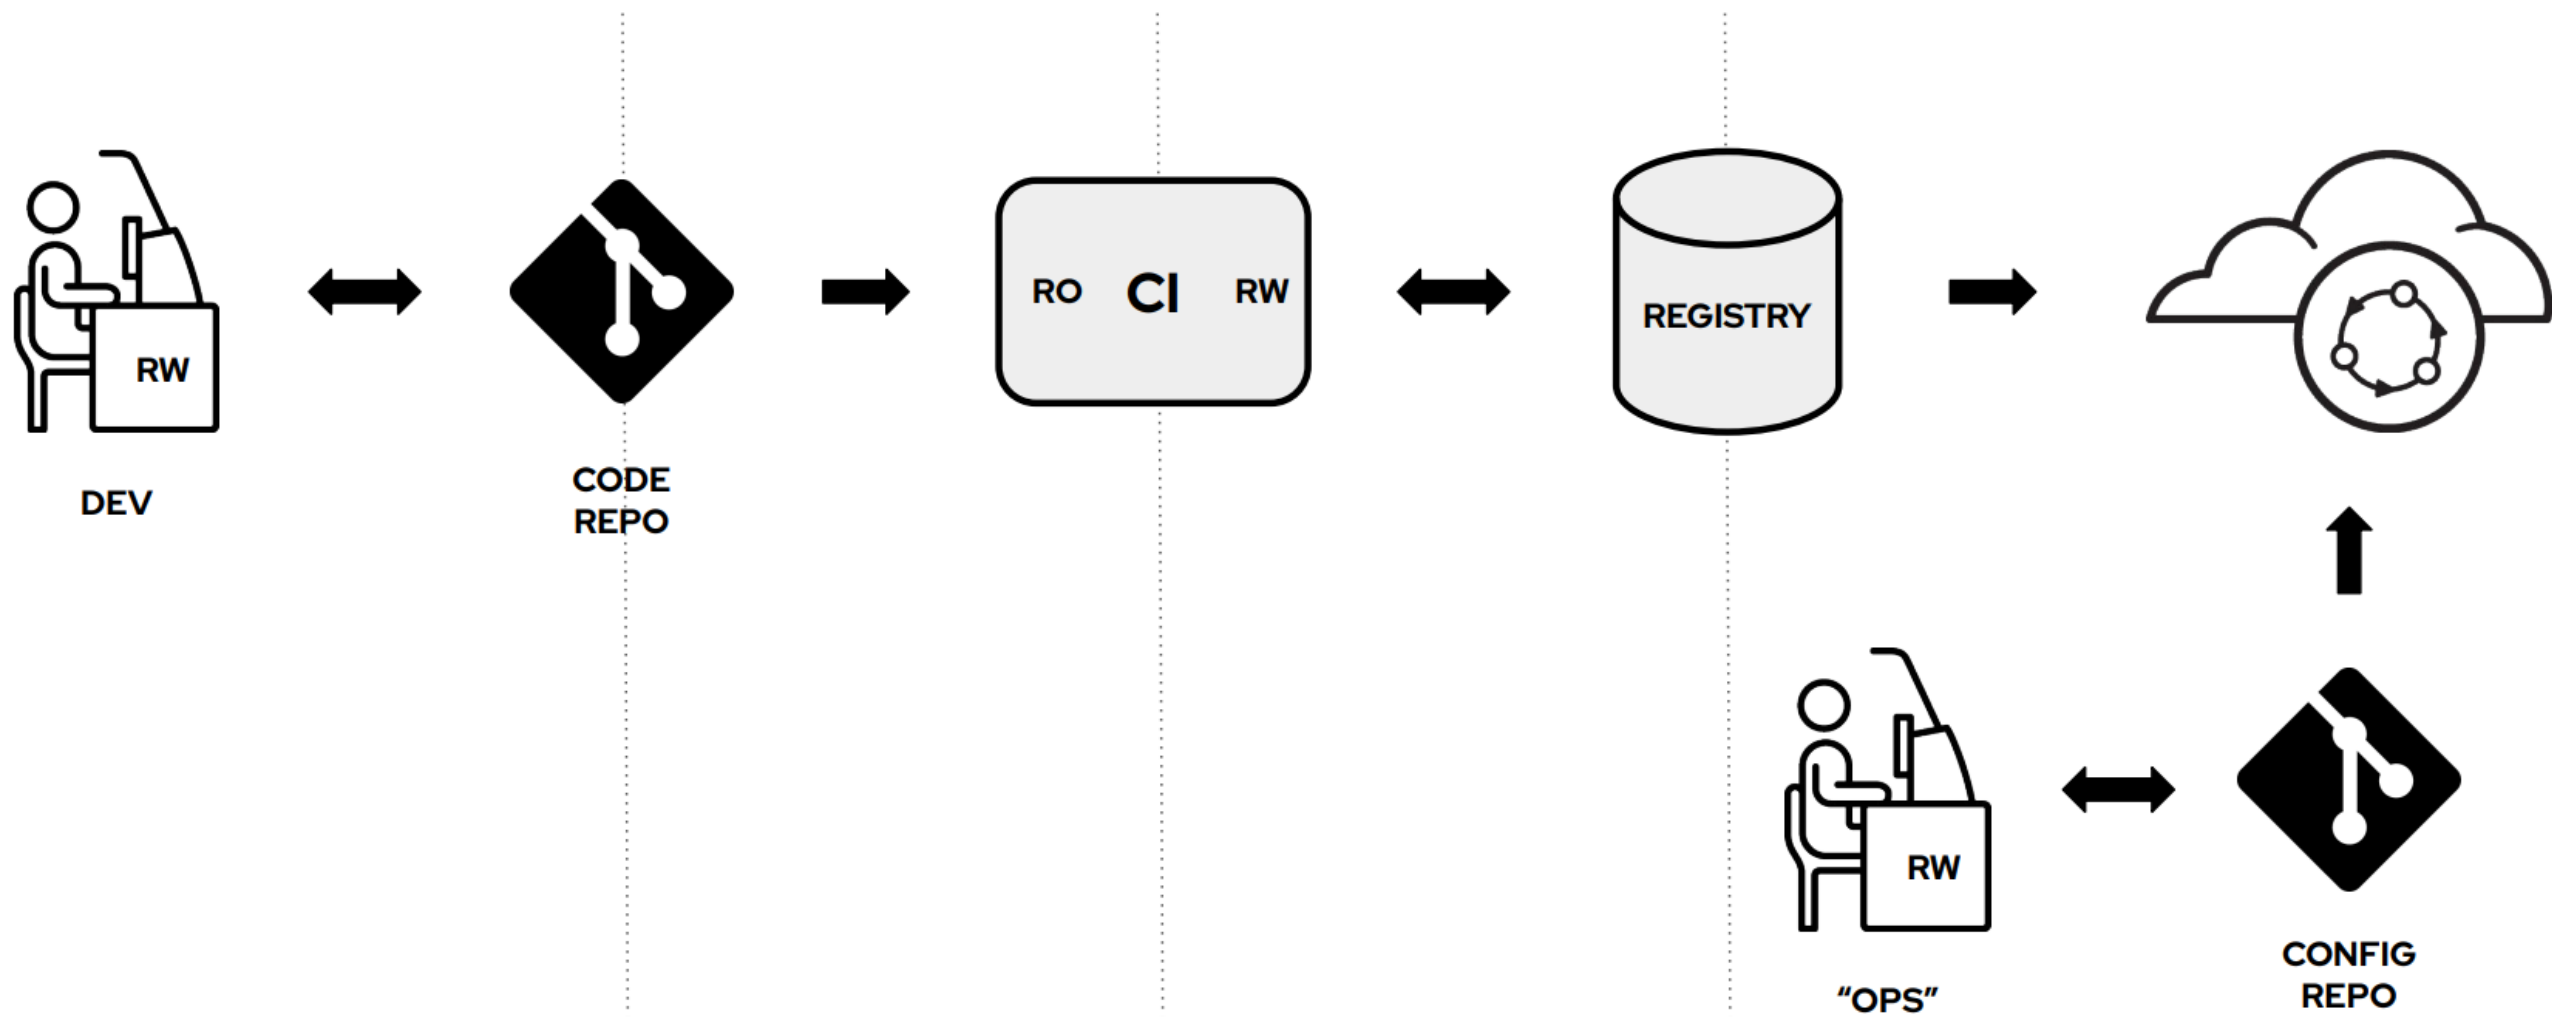

- ✓ RBAC (Role-Based Access Control)
- ✓ Push Button – Easy to execute playbook
- ✓ RESTful API
- ✓ Webhook
- ✓ Workflow
- ✓ Enterprise Integrations
- ✓ Centralized Logging
- ✓ Ansible AWX is **Open Source Community Project**

# AI for Code (Ansible Lightspeed)

# Ansible Lightspeed with IBM watsonx Code Assistant

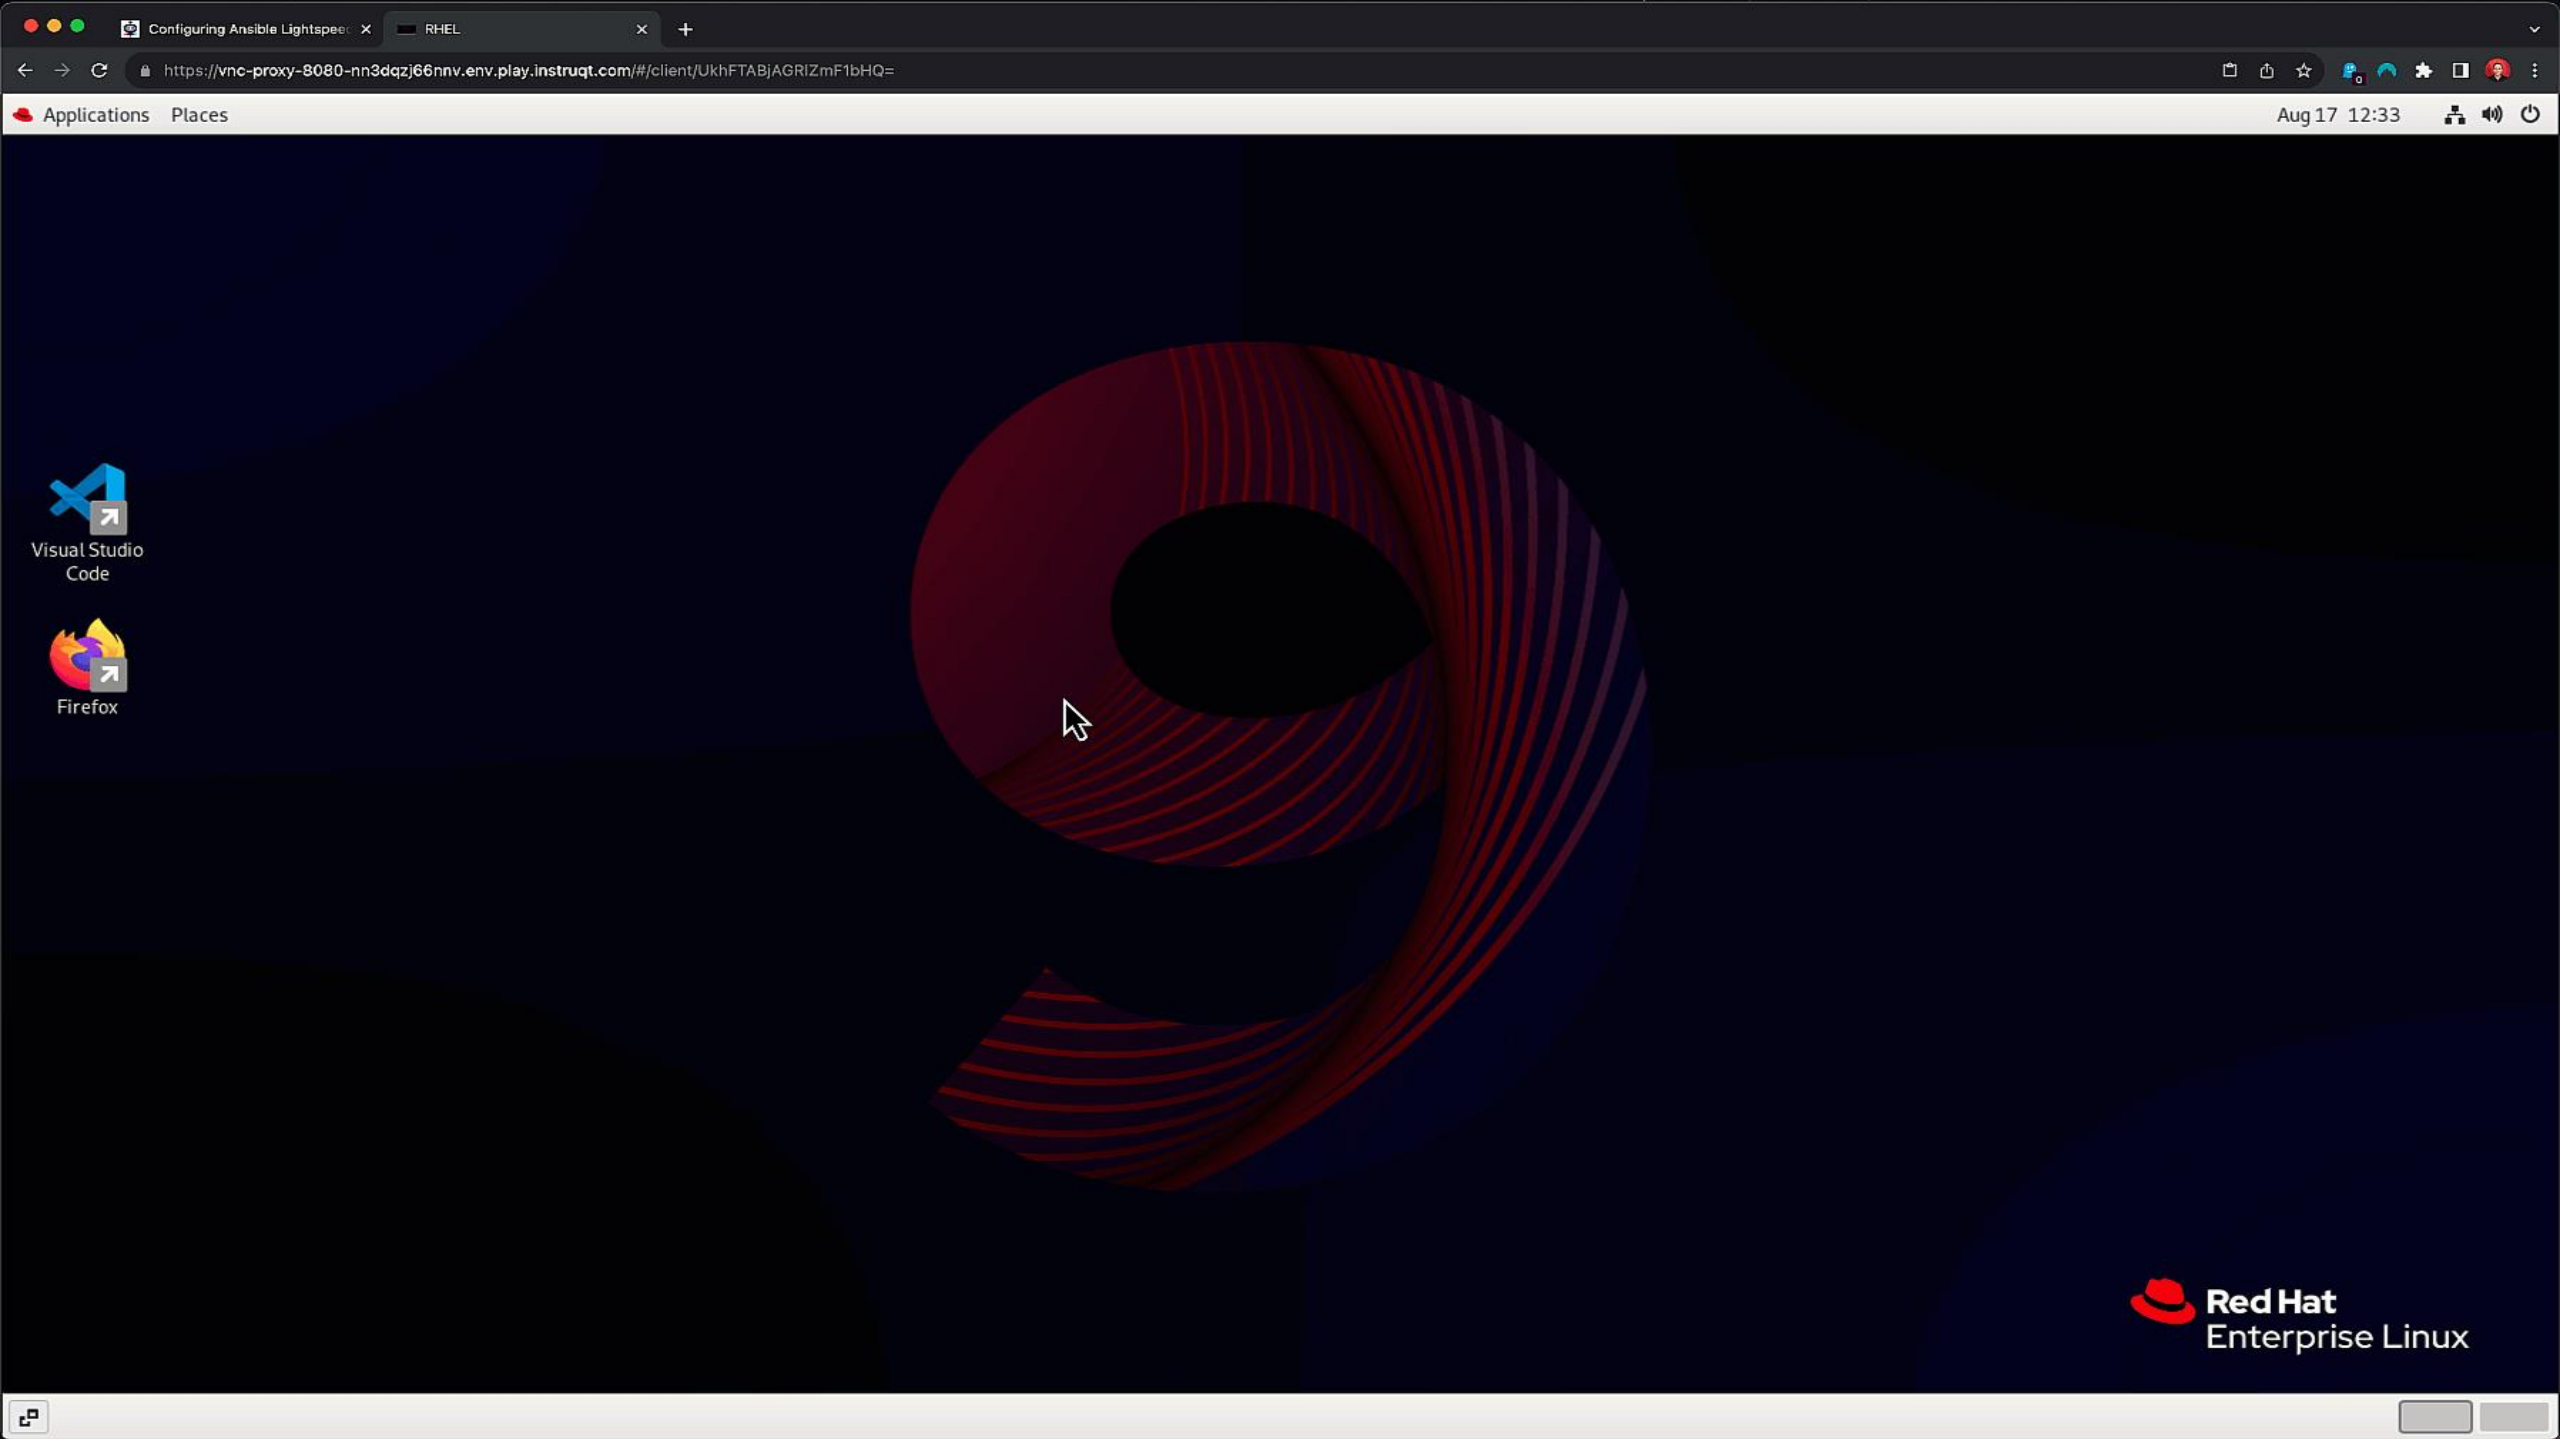

The screenshot shows the Red Hat website header with navigation links: Products, Solutions, Training & services, Resources, Partners, About. On the right, there are icons for Search, For you, Contact us, English, and Log in. Below the header, the page title is "Red Hat Ansible Automation Platform" with sub-navigation: Overview, Use cases, Integrations, Deployment options, and Documentation. The main content area features a dark background with a space-themed illustration of stars and planets. The text reads: "TECHNICAL PREVIEW", "Ansible Lightspeed with IBM watsonx Code Assistant", and "At Red Hat® Summit 2023, we announced the technical preview of Ansible® Lightspeed with IBM watsonx Code Assistant. The preview is now publicly available to all Ansible users, and you can explore the technology, further train our model, and offer feedback on your experience." A "Get started →" link is provided at the bottom left.

# Ansible Lightspeed demo content

Compilation of Ansible Lightspeed demo content and examples.

## How do I configure Ansible Lightspeed?

Please use the following resources to install the Ansible VS Code extension and activate Ansible Lightspeed:

- [Ansible Lightspeed technical preview blog](#)
- [Ansible Lightspeed technical preview video](#)

Feel free to ask questions and provide feedback in the [Ansible Lightspeed Matrix Room](#).

## ! Test before doing a demo

The IBM Watson Code Assistant model continues to improve and evolve with each release. This can result in generated suggestions that differ from the examples provided.

## Tested solution\_\*.yml Playbooks are available for each demo.

Tested Ansible Playbooks are available for each corresponding demo Playbook and start with the `solution_*.yml` prefix. For example, `solution_provision_azure_vm.yml`. Please use this to compare your generated suggestions before doing the demo.

## Demo content folder structure

The repository folder structure is as follows.

```

├─ playbooks/
│  └─ <domain>/
│     ├── demo_<playbook_name>.yml <-- Initial Ansible content for demo.
│     ├── prepare_<playbook_name>.yml <-- Used to prepare environment for demo.
│     ├── README.md <-- Step by step instructions.
│     └─ solution_<playbook_name>.yml <-- Tested Ansible content for comparison.

```

- `<domain>` - Ansible examples are sorted by domain. For example, the `cloud` folder contains AWS, Azure, and Google Cloud content.
- `demo_<playbook_name>.yml` - Playbooks that start with `demo_*` are the initial Ansible example to use in the demo. For example, `demo_provision_ec2_instance.yml` located in the `cloud/aws` folder.
- `prepare_<playbook_name>.yml` - Playbooks that start with `prepare_*` prepares the environment for the demo.
- `README.md` - Contains a video and step-by-step instructions to prepare and perform the demo.
- `solution_<playbook_name>.yml` - Playbooks that start with `solution_*` have been tested with the latest version of the Ansible Lightspeed model. Use the tested Ansible content to compare your Ansible Lightspeed-

## Getting Started

JUMP TO SECTION

Getting Started

Network and Edge

Event-Driven Ansible

Hybrid Cloud

Apply Ansible Automation Platform components, tools, and best practices to support your IT goals—from content creation to task infrastructure management.

### Get started with ansible-navigator

Install ansible-navigator and take a closer look at the command line.

30 mins

### Sign Ansible Content Collections with private automation hub

Learn how to sign Ansible Content Collections using a private automation hub and install collections with ansible-galaxy CLI.

30 mins

### Get started with automation controller

Explore the automation controller interface and complete some basic tasks.

55 mins

### DevOps & CI/CD with automation controller

Integrate a CI/CD pipeline into automation controller to see how Red Hat Ansible Automation Platform supports DevOps practices.

60 mins

### Install Red Hat Ansible Automation Platform on Red Hat OpenShift

Learn to install automation controller and private automation hub with the Red Hat Ansible Automation Platform operators.

60 mins

### Get started with ansible-builder

Install ansible-builder v3 and learn how to create custom execution environments..

45 mins
